DIGITAL LITERACY

Name – Anwesha Nandi

Reg No. – 25BCE11262

Branch – CSE(Core)

Year -2025-2029

Course – Digital Literacy(CSE0001)

Date – 28.03.2026

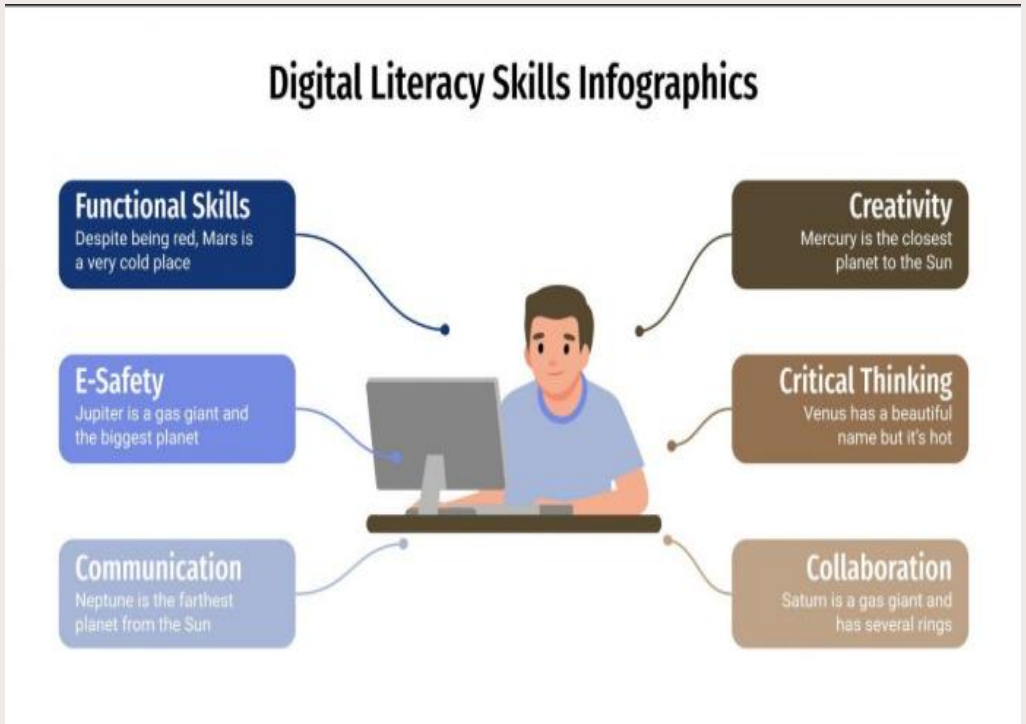
PROJECT REPORT:

INTRODUCTION:

In today's world, digital skills have become very important for students. This project is based on the idea of becoming a Student Digital Ambassador, where I learned how to guide others in using digital tools properly and responsibly.

Through this project, I completed five different tasks that helped me understand topics like digital literacy, creating a professional online profile, using coding and collaboration platforms, writing proper emails, and staying safe from cybercrime. Each task gave me practical experience and helped me improve my confidence in using online platforms. Overall, this project helped me understand how to use the internet in a smarter, safer, and more effective way, which will be useful in both my academic and professional life.

Task-1:Digital Literacy Awareness Infographic



For Task 1, I created a digital literacy awareness poster using Canva. I chose Canva because it is easy to use and provides many templates, icons, and design elements. My poster mainly focuses on explaining what digital literacy means and why it is important for students. I also included topics like safe internet practices and useful digital tools that students can use in their daily academic work.

In the poster, I used simple headings, short points, and relevant icons to make the information easy to understand and visually attractive. I tried to keep the design clean so that anyone can quickly read and learn from it without confusion.

While making the poster, I found it a bit challenging to select the right layout and balance the text with visuals. However, it was also interesting to explore different design options and customize the poster according to my idea. Overall, this task helped me improve my creativity and understand how to present information in a clear and engaging way.

Task-2: Digital Portfolio Write-up

- For this task, I created my student digital portfolio using GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to showcase skills, connect with others and explore opportunities.

- GitHub is mainly used to store and manage projects. I created my profile and added a README file with my basic details like name, branch, and my learning goals. It will help me track my coding progress and share my work in the future.

- LinkedIn is a professional networking platform. I updated my education details, including my college and degree. In the coming years, I plan to use it to connect with seniors, professors, and recruiters, and to stay updated about internships and job opportunities.

- Kaggle is useful for learning data science and practicing problems. I created an account to explore datasets and competitions. I hope to improve my analytical skills by using it regularly.

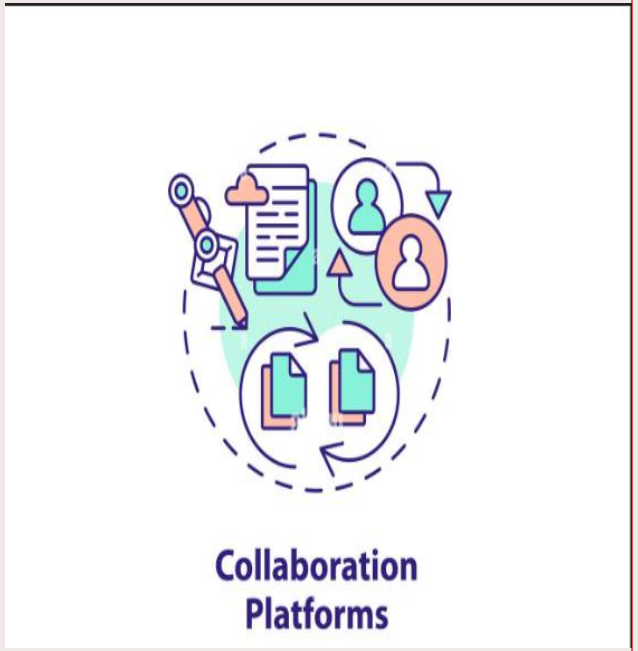
- Overall, these platforms will help me build a strong digital presence and support my academic and career growth over the next four years.

Task-3: Explore Coding & Collaboration Platforms

- For this task, I explored both a coding practice platform and a collaboration tool. I created an account on Hacker Rank and attempted a beginner-level problem. It helped me understand how coding questions are structured and how to think step by step while solving them. Even though the problem was simple, it gave me confidence to try more questions in the future.

- For the collaboration part, I created a Google Form based on digital literacy awareness. I included five questions, with both multiple choice and short answer types. I also checked the responses section and linked it to a Google Sheet to see how answers are collected.

- This task helped me understand how these platforms can be useful in academics. Coding platforms will help me improve my problem-solving skills, while tools like Google Forms can be used for surveys, quizzes, and collecting information easily. Overall, it was a useful experience that I can apply in my studies.

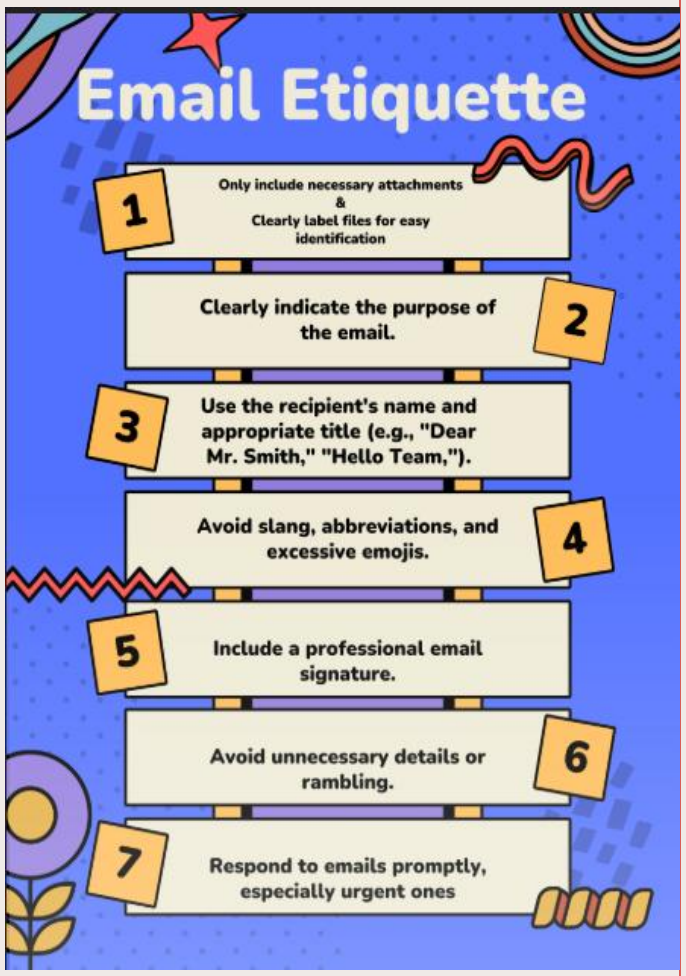


Task-4:Draft a Professional Email & Etiquette Guide

- I remember a situation where I needed help from a teacher but sent a very short and unclear email without a proper subject or greeting. I just wrote my problem directly, thinking it would save time. However, I did not get a reply for a long time, and later I realized that my email might have seemed informal or confusing.

- After that, I understood that the way we communicate online really matters. If I had written a proper subject line, greeted the teacher politely, and clearly explained my issue, it would have been easier for them to understand and respond.

- Now, I try to be more careful while writing emails. I make sure to keep the tone respectful and the message clear. This small change has helped me communicate better and avoid misunderstandings.



Task-5:Cybercrime Awareness Case Study & Prevention Guide

- While working on this task, I was surprised to learn how easily people can fall into cyber fraud, especially in UPI-related scams. Earlier, I believed that such frauds only happen due to major carelessness, but I realized that even small actions, like entering a PIN without checking the request, can lead to serious financial loss. The methods used by scammers are very convincing, as they often create urgency or pretend to be genuine people, which makes it difficult to identify the fraud immediately.

- One important habit I will change after this is being more alert while using online payment apps. I will make sure to carefully read every payment request and avoid responding to unknown calls or suspicious messages. I will also never share my personal or banking details with anyone. This task has made me more aware of digital risks and has encouraged me to use online platforms more responsibly and carefully in my daily life.

Conclusion:

- This project helped me understand the importance of digital literacy in a practical way. Through different tasks, I got the opportunity to explore various tools and platforms that are useful for students. From creating an infographic to building my digital portfolio, each activity gave me a new learning experience. I learned how to present information clearly, maintain a professional online presence, and use platforms like GitHub, LinkedIn, and Google Forms effectively.

- One of the most useful parts of this project was learning about communication and email etiquette. It made me realize how important it is to be clear and respectful while interacting online. The cybercrime task also increased my awareness about online risks and the need to stay careful while using digital platforms, especially for payments.

- Overall, this project was not just about completing tasks but also about developing important digital skills that will help me in academics and future career opportunities. It has made me more confident in using online tools responsibly and effectively in my daily life.

Thank You!
